Bachelor's degree graduate from Universitas Pembangunan Jaya, specializing in Information Systems. Experienced in data analysis and structured data management, with a strong proficiency in using SQL for extracting and validating banking transaction data. Proven ability in designing application process flows and developing internal management tools to track End-of-Month (EOM) processes. A detail-oriented professional committed to ensuring data integrity and providing accurate insights to support business decision-making.

WORK EXPERIENCE

PT. Bank Republik Indonesia (Persero) Tbk — Gedung BRI II, Jl. Jenderal Sudirman — July 2025 - Now

Valuation Data Analytics - Assistant

- Extract and analyze large-scale transaction data using SQL / DBMS to support the Valuation Data Analytics team within the Finance Management Accounting division.
- Perform data cleaning, analysis, and validation to ensure the accuracy and integrity of financial datasets required for official financial reporting.
- Collaborate with cross-functional accounting teams to provide data-driven insights and ensure alignment between analytical outputs and reporting standards.
- Developing a structured management application to track End-of-Month (EOM) processes, improving team workflow and data organization.

PT. Aerowisata Garuda Group — Jalan Prajurit, Central Jakarta — June 2024 - September 2024

IT Analyst

- Identifying business needs related to IT governance policies in alignment with the Harmonization of Strategy and Policy directives from the Garuda Group.
- Designing IT policies and procedures that support and align with business objectives.
- Adopting frameworks such as COBIT and ITIL to ensure policies comply with international standards and best practices.
- Developing information system management procedures, including testing, deployment, and maintenance processes.

PKM–PM Financial Application for MSMEs — UPJ, South Tangerang — July 2023 - June 2024

Project Leader & Business Analyst

- Developed a Financial Application for MSME Community (Tangguh Berkibar): Designed and implemented an intuitive and functional financial application to help MSMEs manage their financial tracking efficiently.
- Identified Business and Technical Requirements: Collaborated with stakeholders to gather and analyze business and technical needs, translating them into clear, actionable specifications for the development team.
- Coordinated Development Team: Led and coordinated both front-end and back-end developers throughout the Software Development Life Cycle (SDLC), ensuring on-time delivery and adherence to quality standards.
- Project Leadership: Acted as the development team lead, managing team communication, setting project goals, and ensuring all components were well-integrated and aligned with user needs.
- Application Testing and Validation: Oversaw the testing and validation process to ensure the application was bug-free and met end-user requirements, performing iterations based on user feedback and test results.
